

My comment is simply: What the hell is going on????I have had XM Radios (in my car, in my home and a portable unit) for close to two years now and hardly ever listen to regular radio, I do turn on 92.5 FM in the morning in my bedroom, that's it! Why would ANYONE even bother with FM?? (or, Heaven forbid, AM???) I drive and have XM on, I sit and read the paper in the morning, listening to XM. What is the reason for FM? (or God knows why, AM?) Please, whoever is fronting the attack on XM (or Sirius) (Satellite Radio in general) lay off!
